Xafinity comments on the UK Corporate Pensions deficit position following PPF announcement

Xafinity corporate solutions director, Robert Hunt, responded to the PPF statement issued earlier this week that announced UK pension schemes had achieved a £300m surplus for the first time since June 08.

"I don't like to dampen spirits when the Pensions Protection Fund has just announced an aggregate surplus for UK pension schemes but increased inflationary expectations and reducing corporate bond yields have undermined the growth in scheme asset values. These higher inflation expectations have little impact on the PPF liabilities due to its capping arrangements but could have a serious impact on its beneficiaries as their future compensation would lose purchasing power."

Based on assumptions as at 31 March 2010, the Xafinity Corporate UK Pension Scheme model is now predicting a deficit at the end of 2010 of around £442 billion. This is an increase of about £100 billion from the £341 billion shown at the end of February and has resulted from falling bond yields and increasing inflationary expectations.

The Corporate UK Pensions Scheme model findings are updated and published on a monthly basis to give all those connected with a pension scheme an indication of how changing market conditions can impact the financial status of pension schemes.

Pension professionals are able to manipulate the interactive tool on Xafinity's website to see how the year end funding position of Corporate UK Pensions Scheme varies under their own economic predictions – www.xafinity.com/modelsolutions

Background information:

NOTE - Using as a base the dataset from the PPF's and the Pensions Regulator's "Purple Book", the model covers over 99% of the UK's PPF-eligible DB schemes and some 12.4 million members thus providing the most comprehensive and accurate appraisal of funding in the UK.

In June last year Xafinity Consulting launched the 2009 version of their Corporate UK Pension Scheme model. The model received significant media attention given that it provides the most comprehensive review of the deficits shown by defined benefit pension schemes in the UK. The model was constructed using the fourth edition of the Purple Book that covered 93% of the UK's PPF eligible pension funds.

The fifth purple book released on the 19th January 2010 provides an even more comprehensive survey being based on 99% of the liabilities of UK pension schemes. The findings of this survey confirmed the predictions of the Corporate UK model that the vast majority of UK pension schemes would have significant deficits.

At the end of January, on the back of the new Purple book Xafinity Consulting launched the 2010 version of the Corporate UK Pension Scheme model and a copy can be accessed at www.xafinity.com/modelsolutions. The model will be up-dated on a monthly basis to give all those connected with a pension scheme an indication of how changing market conditions can impact the financial status of pension schemes.

About the model:

By using the unique power of Xafinity's Model Solutions technology, Xafinity Corporate Solutions 'Corporate UK Pensions Scheme' model can project future funding positions. It accurately models the impact that future changes in the factors that influence assets and liabilities will have on the overall funding of UK pension schemes, whether measured on an ongoing funding, FRS17 or even buy-out basis.

To date most of the surveys covering the funding positions of UK final salary arrangements have focused on the pension schemes of only the very largest

companies - often the FTSE100 - and have primarily aggregated their historic or current funding positions. Whilst sizeable in liability value, in number these schemes represent less than 1.5% of UK final salary schemes and thus cannot show a representative picture of the true funding plight of UK defined benefit arrangements.

Recognising this deficiency, Xafinity Corporate Solutions has, utilising its powerful Model Solutions valuation tool, created the Corporate UK Pensions Scheme model. Using as a base the dataset from the PPF's and the Pensions Regulator's "Purple Book", the model covers over 99% of the UK's PPF-eligible DB schemes and some 12.4 million members thus providing the most comprehensive and accurate appraisal of funding in the UK.

You can visit the Xafinity's Corporate Solution's web site at www.xafinity.com/modelsolutions and use the interactive tool to see how the year end funding position of **Corporate UK Pensions Scheme** varies under your own economic predictions.
